Our expertize

Butique Software House with corporate history that goes beyond the usual application development.

Process digitalization

Our services helps reduce waste, increase efficiency and optimize information flow. Explore the possibilities that digital transformation may bring to your business.

App development

Bespoke mobile and web application development. We create software tailored to the needs and wants of customers and users.

eCommerce

Expand your sales channels and move your business online with us. online with us. Custom made as well as shelf made solutions.

Web development

We create advanced web designs for demanding Customers, who expect unconventional and effective solutions as well as integrations with their internal and external systems.

How we work

Need analysis

Every project begins with a needs analysis. We focus on delivering value by identifying key functions and success factors.

Objectives

Hand in hand with the Customer we analyze what effects will be brought with planned solutions. Cost reduction, productivity improvements, quality, meeting formal requirements. Implementation should always translate into business performance.

Plan

You do not want to boil the ocean, neither do we. Together we create a minimum functional product (MVP) and development plan for the next generations. Together with the Client we establish work schedule and communication plan.

Co-operation

Our team consist of practitioners, specialists with years of experience. We understand the processes, we can find a solution, optimize it and adjust to the organization's specifics. We speak the language of business and we can translate it into the language of a software developer.

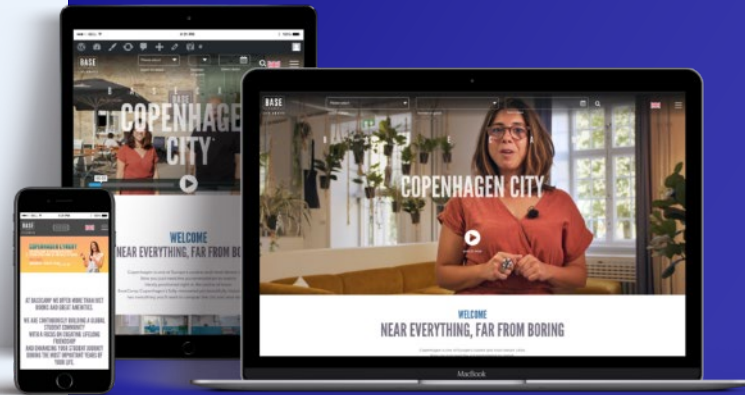

Implementation and maintenance

We practice approach based on Scrum / Scrumban methodologies. We believe in commitment, openness and mutual respect. Our goal is to build a long-term, partner relationships.

Competences

Website development

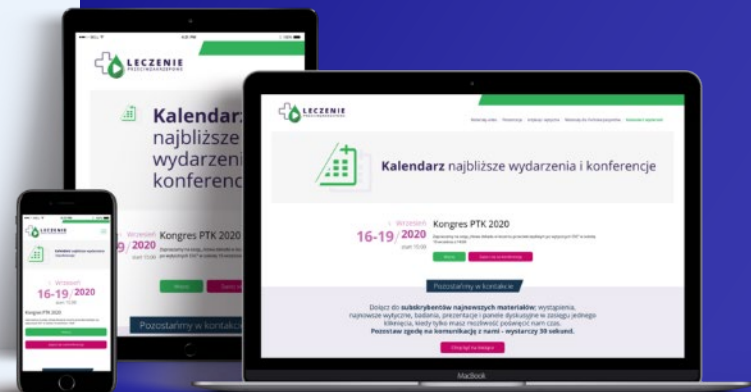

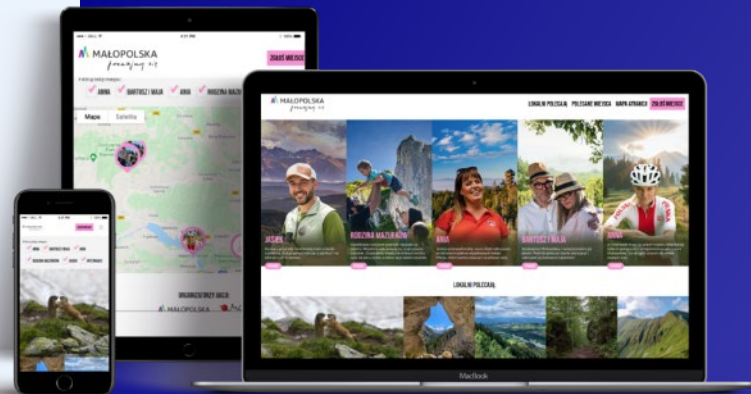

From simple to complex websites, including integrations with internal and external customer systems.

Competences

Web and mobile applications

Web, mobile and PWA applications. Regardless of the type, we provide the software development services from A to Z.

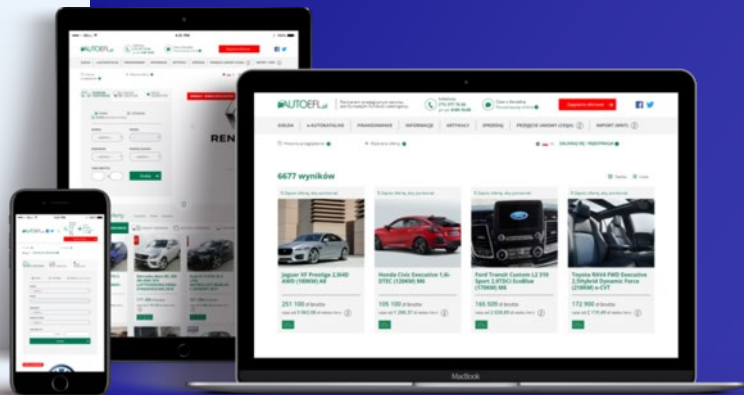

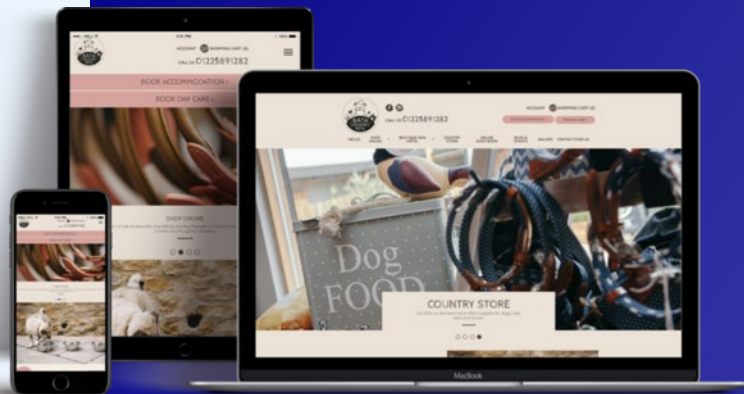

Competences

eCommerce

We help you move your business online. We use proven open source solutions (WooCommerce, Shoplo, Shopify) and based on them we create out-of-the-box solutions for your business.

We provide comprehensive support, from design through implementation, testing, security, integration, migration and SEO optimization.

Products

Komunikuje.pl

Komunikuje is a platform supporting internal communication with deskless, direct workforce.

There is plenty of communication solutions on the market, However, most of them target administration.

Our solution fills the gap in communication with employees, who do not have company phones, laptops and e-mails.

[Find out more about our solution](#)

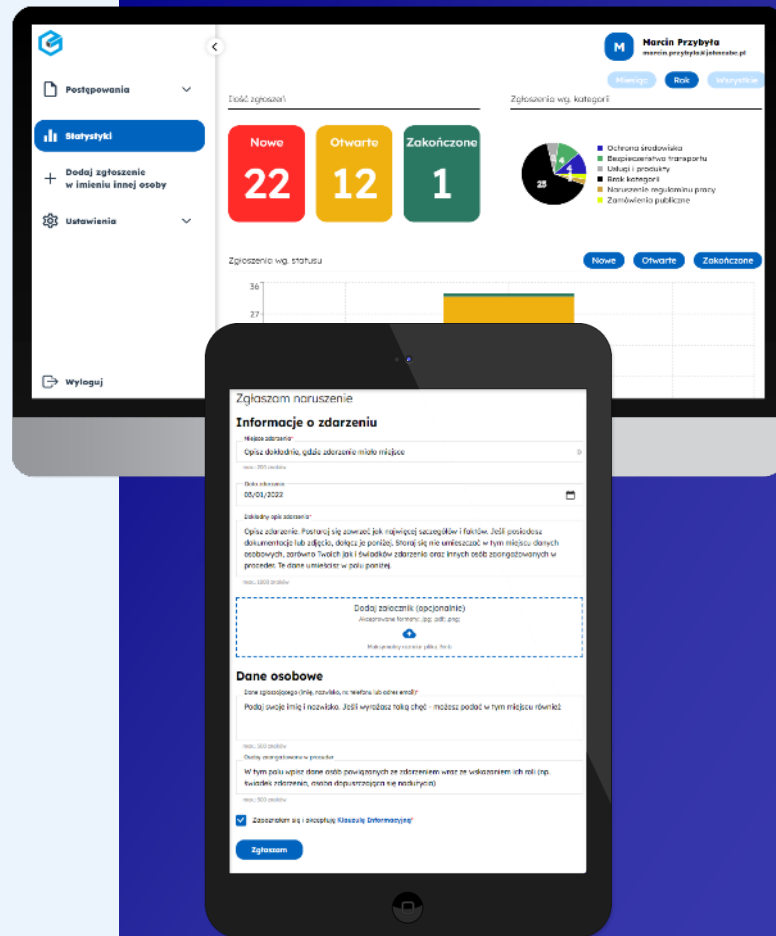

Products

Whistleblower

We provide our clients with a consistent communication tool, also in the area of risk management.

We offer an intuitive external whistleblowing and breach reporting channel, fully compliant with the requirements of Directive 2019/1937.

Competences

Business process digitalization

We design systems and applications based on a detailed analysis of the organization's goals and needs. We take into account the currently used systems and IT tools which we can integrate or transform in order to increase the effectiveness of the planned application.

You define goals, we choose the best solution. Our experience and knowledge allow us to create effective tools that support the success of your business.
